

# TESTIMONIALS

Richards Island Perimeter Drains recently did work at our home involving replacing 30 year old perimeter drains. They kept to schedule, came in on budget, the work was done well, and even the extras that were added to the project at our request were priced fairly, and added significantly to value of our home. Richard's crew were all very respectful and careful of our property, it was a pleasure to have them on site. We would recommend them to anyone wanting quality work done at a fair price.

I just knew from day one I could trust you guys. I wasn't once disappointed throughout in what turned out to be a big and what I thought very difficult job. The winter moldy smell we endured for many years is now gone and both Fran and I couldn't be more pleased. Thank you.

**Jim and Fran**

My wife & I consulted with Richard's Island Perimeter Drains prior to purchasing our new home. Richard's inspection was very thorough & he gave us several options to fix our perimeter drain issues.

The first heavy rain after taking possession of our home bore out Richards suspicions as we had water rising in our crawl space.

Despite it being Richard's busy season he rearranged less urgent jobs & was able to get his crew on our job within only a couple of days.

From first shovel in the ground to final clean up Richard & his crew were extremely thorough & courteous.

**Call Toll Free 1-800-867-8084**

# WHAT WE DO

Perimeter drains are installed at the base of your home's foundation to channel away any ground water, this is done to protect your foundation and in turn to protect your house. Checking these drains every couple of years highly reduces the risk of basement flooding or other unpleasant foundation disasters.

Preventative maintenance is the most cost effective way to preserve your investment and protect your home.

A camera inspection of your drains can quickly indicate the severity of a suspected blockage.

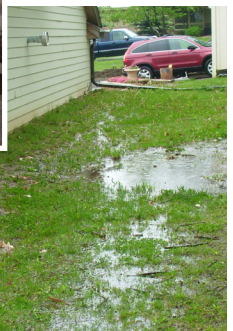

A neglected perimeter pipe causes mud build up and makes it difficult for water to pass through.

This was a soggy yard which required a French drain, this is the beginning of the installation process.

## RED FLAGS YOU MIGHT HAVE ISSUES:

- Damp Basement
- Dank Odour
- Water in the Basement
- Efflorescence Powder (A White Chalky Substance) along Floors and Walls
- Soggy Yard
